# History Note Control

Overview

A new note template control has been added to allow users to view and/or edit the ICD Summary and Family History information from the note without the use of a pop-up.
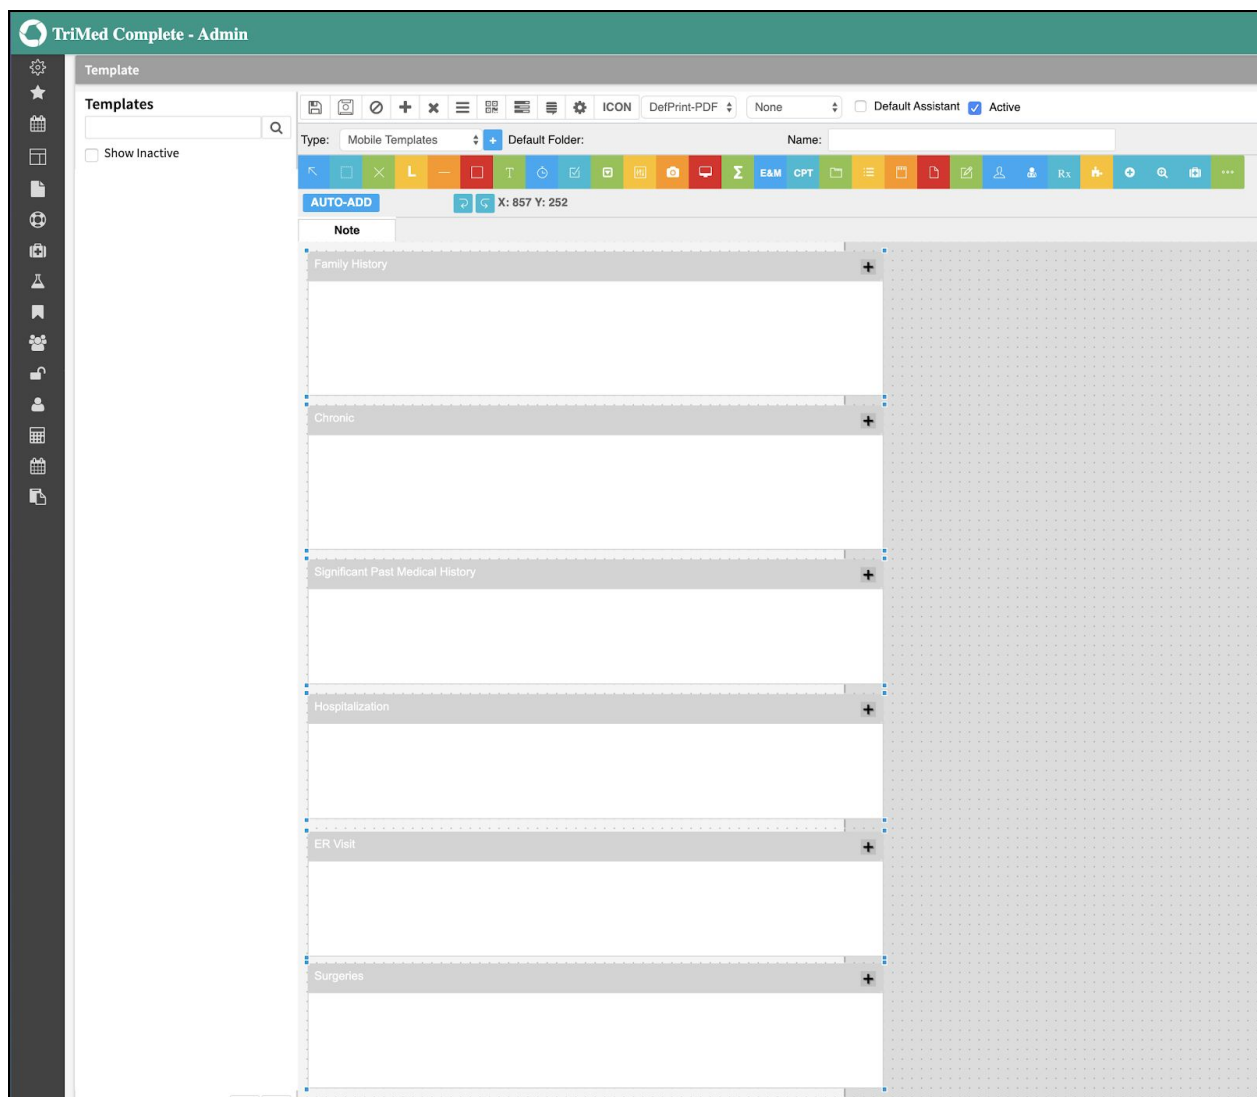

Admin

Within Admin > Templates > Note Templates a new *Medical History* control has been added.

Within the Control Properties select the Status and other desired settings. A default ICD Picker can also be selected. **Note:** The Height is required and it is recommended to set to at least 150 px.

Features

When the note opens the control will pull in any existing ICD Summary or Family History for the patient, much like the current Blue Box feature. The header will display the Status selected within Admin.

Users can click *None Reported* when applicable, or by clicking the + icon new items can be added.

Chronic (0)		None Reported	✚
Status	Description	code	

When clicking the + icon a box will appear below the control. Users have the same options within the History Note Control as they do with the current ICD Summary screen. Typing in a Description will also filter any matching templates (that have previously been set up in Chart Header Templates within Admin).

Clicking *Save* will save the entry and close the Add box. Clicking the *Add* (+) button will save the entry, and keep the box open to add another entry. Clicking *Cancel* or *Delete* will auto-close the box.

Chronic (0)		None Reported	➕
Status	Description	code	

Description: ADHD

Date: MM YYYY   Resolved Date: MM YYYY

ICD: **SNOMED:**

Clicking 'Save' on the Family History control will allow users to save the entry to the Patient and/or Family.

Family History (1)			➕
Relationship	Description	code	
Brother	ADHD		✖
